C3: 35

C4: 40

TABLE OF CONTENTS

Course 1 — Just Delegate It

Keywords #1–25 • Delegation, Authority, Artifacts...

Course 2 — AI Fluency

Keywords #26–50 • 4Ds, Modes, Diligence...

Course 3 — Workflow Design & Diagnosis

Keywords #51–85 • Steps, Gates, Friction...

Course 4 — Governance, Risk & Responsible Use

Keywords #86–125 • Data Tiers, Redaction, Incidents...

1

Just Delegate It

Keywords #1–25 • Delegation ke core concepts, brief writing, aur accountability

Delegation #1

Kisi ko (ya AI ko) poora kaam saunpna — sirf sawaal nahi poochna.

"Report banao" yeh delegation hai. "Report kaise banta hai?" — yeh sirf asking hai.

Asking #2

AI se sirf information maangna — kaam aap khud karte ho. Yeh delegation nahi hai.

Delegation ka opposite hai asking. Kaam nahi dete, sirf poochhtay hain.

Delegation Brief #3

Kaam shuru karne se pehle likhi gayi 6-line planning document. Outcome, context, constraints, authority, deliverable, verification — sab isme hota hai.

Jese engineer koi kaam shuru se pehle blueprint banata hai — brief woh blueprint hai.

Outcome #4

Kaam khatam hone par kya cheez exist karni chahiye. Method nahi, sirf result batao.

"Ek 2-page executive summary chahiye" — yeh outcome hai. "Likho" nahi.

Outcome Over Method

#5

AI ko "kya chahiye" batao — "kaise karo" nahi. AI khud best tarika dhundega.

Micro-manage mat karo. Destination batao, rasta AI choose kare.

Context

#6

Woh information jo AI independently nahi jaan sakta — background, details, special circumstances.

"Yeh email CEO ke liye hai jo data nahi dekha" — yeh context hai AI ke liye zaroor.

Constraints

#7

Kaam ki limits aur requirements — kya zaroor hona chahiye, kya nahi hona chahiye.

"500 words max, bullet points nahi, formal tone" — yeh constraints hain.

Authority

#8

AI kya faislay akele le sakta hai, aur kya nahi. Bina authority line ke AI silently decide karta rahega.

"Format choose kar sakte ho, lekin discount approve karna mujhe poochho" — yeh authority hai.

Deliverable

#9

Kaam ka final form — table, document, PDF, email draft. Conversational jawab nahi, artifact chahiye.

"Mujhe Word document chahiye, sirf chat mein jawab nahi" — yeh deliverable define karna hai.

Verification

#10

Kaam accept karne se pehle kya check karoge. 4 steps: Identify, Trace, Challenge, Decide.

Sirf padhna nahi — actively check karna ke kya AI ne sahi kiya.

Artifact

#11

Tayyar, downloadable, finished cheez. Conversational jawab nahi — actual document ya file.

Chat mein typed answer artifact nahi hai. PDF ya Word file artifact hai.

Silent Decision

#12

Jab AI koi choice kare bina bataye. Authority line nahi hoti toh yeh hota hai. Silent decision review nahi ho sakta.

AI ne format change kar diya bina pooche — yeh silent decision hai.

Plan-First

#13

Execution shuru karne se pehle AI se step-by-step plan mangwao. Approve karo phir kaam shuru ho.

Pehle roadmap banwao, phir haan kaho, phir AI chale — yeh plan-first approach hai.

Standing Instruction

#14

Project mein likha hua rule jo har session mein automatically apply hota hai. Baar baar batana nahi padta.

"Hamesha formal Urdu mein jawab do" — standing instruction hai project mein save.

Project (AI)

#15

AI platform ka woh space jisme files aur standing instructions save hoti hain. Recurring jobs ke liye.

ChatGPT ya Claude ka "Project" folder — permanent memory aur rules ka ghar.

Knowledge (in Project)

#16

Project ke andar saved files aur documents jo AI har baar automatically read karta hai.

Company style guide project knowledge mein dalo — AI har baar usi se kaam karega.

Escalate Capability

#17

Jab prompt fix karne se kaam nahi banta — model ya feature upgrade karna. Log yeh step miss karte hain.

GPT-4o se kaam nahi hua? o1 ya Claude try karo — yeh capability escalation hai.

Take Job Back

#18

Jab AI bar bar fail ho — kaam wapas le lo aur khud karo ya doosra tool use karo.

Agar AI 3 baar galat kare — zyada fix karne ki koshish chhoro, khud kar lo.

Brief Portability

#19

Achi brief doosre AI tool mein bhi kaam kare. Proof ke kaam describe karta hai, tool nahi.

Claude mein likhi brief ChatGPT mein bhi same result de — yeh portable brief hai.

Accountability

#20

Zimmedari hamesha aap ki rehti hai — chahe AI ne kaam kiya ho. AI zimmadari nahi le sakta.

"AI ne galat kiya" — yeh defense nahi hai. Aap ne delegate kiya tha toh aap zimmadaar hain.

Automation Bias

#21

AI output ko bina check kiye trust karna sirf isliye ke woh polished lagta hai.

Sundar formatted report = automatically sahi nahi hoti. Check karna zaroor hai.

Fresh Chat

#22

Naya conversation shuru karna taake pehla context carry na ho. Context overload fix ke liye.

Lambi conversation ke baad AI confuse ho? New chat kholo — fresh start.

Temporary / Incognito Chat

#23

Woh conversation jo save nahi hoti, memory mein nahi jaati.

Sensitive info ke liye incognito mode — koi storage nahi hoti.

Intervention Moves

#24

6 tarike kaam theek karne ke: restate, correct, redirect, change requirement, escalate, take back.

AI galat ja raha hai? In 6 mein se ek move lo — chhod mat do aur haan bhi mat kaho.

Delegation Record

#25

Brief, execution, checks aur final decision ka ek-page summary. Accountability ke liye.

Har delegated kaam ka record rakho — audit mein kaam aata hai.

2**AI Fluency**

Keywords #26–50 • 4Ds framework, modes of AI use, diligence aur hallucination

AI Fluency

#26

AI ko effectively, efficiently, ethically aur safely use karne ki salahiyat. Sirf access hona fluency nahi hai.

Tool hona aur tool chalana jaanna — dono alag hain. Fluency skill hai, shortcut nahi.

4Ds Framework

#27

Delegation, Description, Discernment, Diligence — charo skills ek loop mein kaam karti hain.

AI fluency ka poora system in 4 words mein — yaad rakho Delegation Description Discernment Diligence.

Automation (Mode)

#28

AI specific tasks perform karta hai jo aap ne exactly specify kiye. Aap script writer hain.

Email send karo, report generate karo — aap ne exactly bataya, AI ne exactly kiya.

Augmentation (Mode)

#29

Insaan aur AI milke sochte hain. Dono partners hain. Brainstorming, review mein yeh mode hai.

AI se ideas maango, aap filter karo, phir refine karo — yeh augmentation hai.

Agency (Mode)

#30

AI goal pursue karta hai aur khud steps decide karta hai aap ki boundaries ke andar. Aap director hain.

"Project research karo aur summary banao" — AI khud steps tay karta hai. Yeh agency mode hai.

Problem Awareness

#31

Kaam dene se pehle goal, risks, aur success criteria samajhna. Delegation ki pehli zaroorat.

Pehle khud samjho kya chahiye — phir AI ko batao. Confusion forward transfer hoti hai.

Platform Awareness

#32

Sahi kaam ke liye sahi AI tool choose karna. Reasoning model, search model, coding agent — sab alag hain.

Coding ke liye GitHub Copilot, deep analysis ke liye o1 — wrong tool = bad results.

Task Delegation

#33

Kaam ke hisson ko deliberately AI ya human ko assign karna.

Research = AI, final decision = human, drafting = AI, approval = human — yeh task delegation hai.

Product Description

#34

Output kya hona chahiye — type, audience, format, length, tone, focus, exclusions.

"500 word blog, CEO audience, formal, no jargon" — yeh product description hai.

Process Description

#35

Kaam ka tarika — steps, order, methods, examples follow karne hain.

"Pehle outline banao, phir draft, phir edit" — yeh process description hai.

Performance Description #36

AI ka behavior define karna — challenging, concise, exploratory, ya decisive. Deployed systems mein thousands ke liye rules.

"Hamesha 3 options do aur recommend karo" — yeh performance description hai.

Context Engineering #37

Sirf ek prompt nahi — poori information architecture design karna: instructions, documents, tools, memory, policies.

Prompt sirf ek hissa hai — context engineering poori system design hai.

Hallucination #38

AI ka confident lekin galat ya fabricated information dena. Polish se judge mat karo.

AI ne fake citation di jo confident lagi — hallucination. Verify karo hamesha.

Product Discernment #39

Output khud evaluate karna: factually correct? Requirements follow? Internally consistent? Expert credible?

Output padhke judge karo — kya yeh kisi expert ko dena safe hai?

Process Discernment #40

Kaam karne ka tarika evaluate karna: AI adapt kar raha hai? Same mistakes repeat? Mujhe zyada edit karna pad raha hai?

Agar aap AI se zyada edit kar rahe ho — shayad AI se seedha likhna faster hai.

Performance Discernment #41

Deployed AI ka behavior evaluate karna — sirf scale par observable. Monitoring infrastructure chahiye.

1000 users ka AI system — kaise pata chale ke sahi kaam kar raha hai? Monitoring se.

Creation Diligence #42

Kaam SHURU karne SE PEHLE: kya data safe hai? Tool approved hai? Legal restrictions hain?

Before you start — check data, check tool, check laws. Yeh creation diligence hai.

Transparency Diligence #43

AI ka role disclose karna jab output logo ko affect kare. Zyada impact = zyada disclosure zaroor.

AI-written report jo board ko jaaye — clearly mark karo ke AI se banaya.

Deployment Diligence

#44

Publish/send/execute karne SE PEHLE verify karna. Irreversible actions mein zyada checking.

Email mass send karne se pehle ek last check — yeh deployment diligence hai.

Redaction

#45

Kaam dene se pehle personal/sensitive details hata dena. Task pattern rakho, identifiers hatao.

Customer name hata ke "Customer A" kar do — AI ko sirf pattern chahiye, naam nahi.

Numbers Rule

#46

Koi bhi number jis par faisla ho — woh code se calculate hona chahiye, AI prose se nahi.

AI ne 42% likha? Verify karo code se. Numbers AI prose se reliable nahi hote.

Digital FTE

#47

AI worker jo ek defined job ke liye configure kiya gaya ho. FTE = Full-Time Equivalent.

AI customer support agent jo 24/7 kaam kare — yeh ek Digital FTE hai.

System Prompt

#48

Har conversation ke start mein automatically read hone wali standing instruction.

ChatGPT ka "custom instructions" ya API ka system message — yeh system prompt hai.

Eval Suites

#49

Repeatable tests jo AI system ke output ko score karte hain. Performance discernment ka engineering version.

Har update ke baad 100 test cases chalao — eval suite yeh automatically karta hai.

Sycophancy

#50

AI ka sirf haan mein haan milana — challenge na karna. Performance description se fix hota hai.

"Aap bilkul sahi hain!" — yeh AI sycophancy hai. Helpful nahi, dangerous hai.

3**Workflow Design & Diagnosis**

Keywords #51–85 • Steps, gates, friction signals, build loops, diagnostic sequence

Step

#51

Workflow ka ek named hissa jiska ek hi owner hota hai.

Research → Draft → Review → Approve — har ek alag step hai.

Delegation Map

#52

Workflow ke har step ko owner aur reasoning ke saath likhna. Kaun kya karega aur kyun.

Table banao: Step | Owner (AI/Human) | Reason — yeh delegation map hai.

Reversibility

#53

Kya galti ho toh undo ho sakti hai? Agar nahi — Human step hona chahiye.

Email send = irreversible. Draft banao = reversible. Irreversible mein human gate rakho.

Stakes

#54

Galti ki worst-case cost kya hai? Zyada stakes = human involvement zaroor.

Customer complaint reply (low stakes) vs. legal document sign (high stakes) — alag approach.

Accountability (Step)

#55

Is step ka faisla koun answer karta hai? Jo answer kare — woh step human ka hai.

Agar kuch galat ho aur boss poochhe — jo jawab dega woh is step ka human owner hai.

AI-Appropriate Step

#56

Woh step jo AI le sakta hai: reversible + low stakes + judged at next step.

Draft banana AI-appropriate hai — human review agle step mein hoga.

Human-Retained Step

#57

Woh step jo insaan ka hona ZAROOR hai: irreversible, high stakes, ya accountability step.

Final approval dena, contract sign karna — yeh human-retained steps hain.

Collaborative Step

#58

AI banata hai, insaan judge karta hai. Dono involved hain.

AI ne 5 options diye, aap ne best chuna — yeh collaborative step tha.

Over-Delegation

#59

AI ko zyada risk dena jitna appropriate nahi. Irreversible ya high-stakes step AI ko dena.

AI ko directly client email send karne dena bina review — over-delegation hai.

Halo Delegation

#60

Ek step ki success ki wajah se doosre step ka kaam bhi AI ko dena. Past performance criterion nahi hai.

"AI ne research acchi ki toh legal review bhi AI kare" — yeh halo delegation ki galti hai.

Unstaffed Gate

#61

Collaborative step jiska review sirf naam ka reh gaya — koi actually check nahi karta. Rubber stamp ban gaya.

"Manager review karega" — lekin manager kabhi time nahi deta. Gate unstaffed hai.

Context Window

#62

Model ki capacity limit — kitna text ek waqt mein "dekh" sakta hai.

Long conversation mein AI pehli baat bhool jata hai — context window bhar gayi.

Stale Configuration

#63

Setup outdated ho gaya — duniya badli lekin AI ka knowledge/instruction update nahi hua.

Company policy change hui lekin standing instruction purani hai — stale configuration.

Baseline

#64

Change se PEHLE ki measurement. Baad mein reconstruct nahi ho sakti. Hamesha pehle record karo.

AI introduce karne se pehle current speed measure karo — yeh baseline hai.

Parallel Run

#65

Purana aur naya workflow 2-3 cycles saath chalana — switch se pehle compare karne ke liye.

AI system aur manual system dono 2 hafte chalao — phir compare karke decide karo.

Four Causes (Timing-Based)

#66

4 diagnoses: Under-specification, Context Overload, Wrong Feature/Model, Stale Configuration.

AI kharab results de raha hai? In 4 mein se ek cause hai. Timing se pata chalta hai kaun sa.

Under-Specification

#67

Prompt mein zaroori information missing. Symptom: pehla jawab hi galat.

Pehle message se hi galat — toh prompt mein kuch chhuta hua hai.

Context Overload

#68

Conversation itni lambi ho gayi ke pehli instructions compress/drop ho gayi. Symptom: session mein gradually kharab hona.

Pehle 10 messages achhe the, phir acha nahi — context overload. New chat kholo.

Wrong Feature / Model

#69

*Galat tool ya model use ho raha hai.
Symptom: ek repeatable specific error.*

*Har baar wohi galti — tool problem hai, prompt nahi.
Different model try karo.*

Computed Not Generated

#70

*Numbers code se calculate hone chahiye — AI
prose se likhna reliable nahi.*

*AI ne average nikala prose mein — verify karo ya
code chalo. Numbers generate mat karo.*

Window Test

#71

*"Kya main is step ki saari zaroorat ki cheezein
context window mein dal sakta hoon?" Pass =
eligible (automatic nahi).*

*Agar sab info fit nahi hoti — step AI ke liye eligible
nahi hai.*

Build Loop

#72

*Ideate → Prototype → Feedback → Refine —
iterative improvement cycle.*

*Pehle draft banao, feedback lo, improve karo, repeat
karo — yeh build loop hai.*

Reaction vs Instruction

#73

*"Too generic" reaction hai. "Standing
instruction mein brand voice add karo"
instruction hai. Lever name karo.*

*Reaction = complaint. Instruction = actionable fix. AI
ko instruction do, reaction nahi.*

Three Homes for Fixes

#74

*Rules → Standing Instructions | References →
Knowledge Base | Procedures → Skills.*

*Har fix ka ghar hota hai — sahi jagah rakho warna
baar baar explain karna padega.*

Friction Signals

#75

*3 patterns: Repetition (same paste), Correction
(same fix), Variance (alag log alag results).
Promote to configuration.*

*Agar aap baar baar same kaam karte ho — yeh
friction signal hai. Fix it permanently.*

Friction Audit

#76

*Har manual step likhna, phir consolidate ya
promote karna.*

*Ek hafte ke kaam mein dekho — kya baar baar same
steps hain? Audit karo.*

Consolidate

#77

*Multiple steps jo baar baar explain karne
padte hain unhe merge karna.*

*3 alag instructions ek standing instruction mein merge
karo — consolidation hai.*

Promote

#78

*Repeated patterns ko chat se configuration
mein move karna.*

*Baar baar same prompt likhte ho? Standing
instruction mein promote karo.*

Escalation Signal

#79

Jab doosre log tool par depend karne lage — yeh infrastructure ban gaya, engineering chahiye.

Puri team aap ka prompt use karne lagi — yeh escalation signal hai. System banao.

Incident Response

#80

4 steps: Stop spread → Record facts → Report → Follow incident owner instructions. Delete mat karo.

AI ne galat data send kiya? Pehle rok lo, phir record karo, phir report karo.

Stakeholder Framing

#81

3 audiences ke liye 3 different descriptions: Technical, Executive, Risk/Compliance. Har ek mein human gate name karo.

Engineer ko technical detail, CEO ko business impact, compliance ko risk bolo.

Map Owner

#82

Ek named person jo delegation map ki accuracy ka zimmedaar ho. Quarterly review kare.

Har map ka ek owner hona chahiye — "team" owner nahi hoti, person hota hai.

Defined Gate

#83

Who reviews + What they verify + When = real gate. "Someone will check" gate nahi hai.

"Ali, har Friday, accuracy check karega" — yeh defined gate hai.

Unstaffed Gate (Workflow)

#84

Gate paper par exist karta hai lekin actually koi review nahi karta — rubber stamp ban gaya.

Process mein review step hai lekin log skip karte hain — unstaffed gate hai.

Diagnostic Sequence

#85

Sabse sasta fix pehle: Prompt → Conversation length → Feature/Model → Configuration → Task fit.

AI fail kare? Prompt fix karo pehle — zyada expensive solution baad mein try karo.

4**Governance, Risk & Responsible Use**

Keywords #86–125 • Data classification, prompt injection, audit strategy, incident response

Four Questions (Governance)

#86

The Case, The Data, The Capability, The People — yeh charon governance framework ka core hain.

Koi bhi AI use karne se pehle in 4 questions ke jawab dene chahiye.

The Case

#87

Kya AI yeh kaam kar sakta hai? Fully appropriate, appropriate with review, ya inappropriate?

Pehle case assess karo — phir data, capability, people check karo.

Reversibility (Governance)

#88

Galti ho toh harm se pehle pakad aur undo ho sakti hai?

Agar action undo nahi ho sakta — human gate zaroor rakho.

Consequence of Error

#89

Galti ki cost: trivial, expensive, harmful, regulated, ya irreversible?

Jitna bada consequence — utna zyada human oversight zaroor hai.

Human Judgment

#90

Kuch tasks relationship ya context ki wajah se insaan ka hona zaroori hai — AI replace nahi kar sakta.

Grieving family se baat karna — AI nahi, insaan kare.

Defined Gate (Governance)

#91

WHO reviews + WHAT they verify + WHEN. Teen elements zaroori hain. "Human in the loop" gate nahi jab tak yeh teen nahi.

Sirf "human review hoga" kehna kaafi nahi — who, what, when define karo.

Three-Tier Data Classification

#92

Green (permitted), Yellow (check first), Red (keep out unless approved route).

Traffic light system — green seedha jao, yellow ruko check karo, red bilkul nahi.

Green Tier Data

#93

Public material, anonymized data. Special control nahi chahiye.

Public website content, anonymized survey data — green tier hai, freely use karo.

Yellow Tier Data

#94

Internal documents, customer identifiers, confidential drafts. Approval ya control chahiye.

Company internal report, client list — yellow tier. Pehle check karo kaise use karein.

Red Tier Data

#95

Credentials, regulated data, privileged material, licensed content. Approved route confirm karo pehle.

Passwords, medical records, legal privilege — red tier. Approved route ke bina bilkul nahi.

Critical Discriminator

#96

Question

"Does the task actually need the identifiers, or only the pattern?" Yeh ek sawaal data governance ka core hai.

Customer complaint analysis ke liye naam chahiye? Nahi — pattern chahiye. Naam hata do.

Redaction (Governance)

#97

Identifiers hatao jo task ke liye zaroor nahi. Lekin fail hoti hai agar: clues still identify karte hain, ya removed info zaroor tha.

Naam hata diya lekin "senior manager in Karachi" rakha — still identifiable. Poori redaction nahi.

Pseudonymized

#98

Direct identifiers replace kiye labels se — lekin mapping exist karta hai. Still sensitive tier.

"Ahmed" → "Patient A" — naam gaya lekin mapping file hai. Still yellow/red tier.

Anonymized

#99

Organizational standard se change kiya gaya — koi identify nahi ho sakta. Tier drop ho sakta hai.

True anonymization ke baad data green tier mein shift ho sakta hai.

Purpose Principle

#100

Data apne original collection purpose ke saath aata hai. Naya use chahiye toh fresh permission chahiye.

HR data hiring ke liye collect kiya — marketing ke liye use? Fresh permission lo.

Entry Point

#101

Route jisse data AI mein jata hai: chat, upload, connector, API, incognito. Har ek ka alag retention aur access.

Upload route alag hai chat route se — retention rules alag hote hain.

Route Matters

#102

Tool approved hona kaafi nahi — woh specific route us specific data aur purpose ke liye approved hona chahiye.

ChatGPT approved hai — lekin red tier data ChatGPT mein dena approved nahi.

The Capability

#103

Kya main yeh feature/skill on kar sakta hoon? 5 checks: Source, Reach, Fit, Outside Content, Actions.

New AI plugin use karna? Pehle yeh 5 checks karo — phir on karo.

Source Check

#104

Skill/connector kisne banaya? Unknown publisher = trust nahi.

Random plugin store se koi bhi install mat karo — publisher verify karo.

Reach Check

#105

Skill kya data, files, systems touch kar sakti hai?

Plugin ko files, emails, database — kya access hai? Check karo.

Fit Check

#106

Woh reach task ke liye proportionate hai? Zyada access = problem.

Email plugin jo calendar bhi read kare — kya zaroor hai? Zyada reach = red flag.

Outside Content Check

#107

Kya skill web pages, emails, customer files padhegi? = Injection risk.

AI email padhe jo hostile instructions contain kare — injection risk hai.

Actions Check

#108

Kya skill send, pay, delete, publish, approve kar sakti hai? Consequential actions = human gate chahiye.

AI payment approve kar sakta hai? Nahi — human gate lagao us step par.

Prompt Injection

#109

Trusted tool untrusted content (email, web page) padhe jo hostile instructions contain kare. Defense: least privilege.

Email mein hidden instruction: "All files delete karo" — AI follow kar le = injection attack.

Least Privilege

#110

AI/agent ko sirf utna access do jitna task ke liye zaroor ho. Read-only prefer karo jab sufficient.

AI ko full admin access mat do sirf email draft banane ke liye. Minimum access do.

The People

#111

Workflow se kaun affect hota hai? Kya fairly? Disclosure chahiye?

Customers jo AI se interact kar rahe hain — unhe pata hai? Fair treatment ho rahi hai?

Exclusion Audit

#112

Sirf jo AI ne select kiya unhe nahi — jo exclude kiye unhe bhi audit karo. Yeh sabse miss hone wala step hai.

AI ne 10 candidates shortlist kiye — lekin rejected 90 ko bhi review karo bias ke liye.

Disclosure Decision

#113

Law/policy check karo pehle. Agar rule nahi: kya AI involvement is person ki understanding change karta?

AI-written medical advice — patient ko batao ke AI ne likha. Understanding change hoti hai.

Shadow AI

#114

Unapproved work data unauthorized tools se guzarne jo organization dekh nahi sakti.

Employee ne personal ChatGPT account mein company data dala — shadow AI hai.

Diligence Gap

#115

Policy aur actual practice ka farq. Risk isi gap mein rehta hai.

Policy kehti hai verify karo — lekin koi verify nahi karta. Yeh gap risk hai.

Residual Risk

#116

Sab controls theek se kaam karne ke baad bhi jo risk reh jata hai.

Saari precautions ke baad bhi kuch risk hota hai — residual risk ko document karo.

Governance Drift

#117

Slowly slowly rules se door hona — chhoti chhoti decisions accumulate hoti hain. Quarterly audit se catch hota hai.

Har baar thoda shortcut, phir shortcuts norm ban jaate hain — yeh governance drift hai.

Governance Record

#118

Ek-page summary: Case, Data, Capability, People, Evidence — har workflow ke liye.

Jese brief delegation ke liye — governance record responsible use ke liye hai.

Re-check Triggers

#119

In cheezon par governance dobara check karo: model change, feature change, data type change, audience change, policy change, vendor terms change.

AI model upgrade hua? Governance re-check karo — sab kuch change ho sakta hai.

Incident Response (Governance)

#120

Stop spread → Record facts → Report through incident channel → State facts plainly → Follow incident owner. Delete karna = concealment.

Kuch galat hua? Mat chhupaao, mat delete karo. Stop, record, report — yeh sequence follow karo.

Connector

#121

Approved link jo AI ko organizational apps se connect karta hai. Exact permissions (scopes) hote hain.

Slack-AI connector — sirf specified channels read karta hai, full Slack nahi.

Skill (Governance)

#122

Saved instruction set — koi built-in permission nahi hoti. Session ki full access se run hoti hai. Isliye source check zaroor hai.

Custom skill download ki — woh aap ki session permissions se chalegi. Source check karo.

Code Execution Sandbox

#123

Isolated space jahan AI code run karta hai — yeh authorization boundary nahi hai, sirf code reach boundary hai.

Sandbox safe code run karta hai — lekin iska matlab nahi ke AI authorized hai. Alag cheez hai.

Audit Strategy

#124

Quarterly sample minimum: workflows kaun se actually use ho rahe hain, kya data flow ho raha hai, gates actually run hue?

Har 3 mahine check karo — AI workflows, data flows, aur gates actually kaam kar rahe hain ya nahi.

Friction Rule

#125

Agar approved path 10 steps ka hai aur unapproved 1 step — deadline pressure unapproved dhundega. Approved path easy banao, tools remove mat karo.

Compliance ka raasta mushkil hoga toh log shortcut dhundenge. Approved path simple banao.

PCAO-F Exam Keywords Cheat Sheet

Prepared by: **Imran Hassan** • 125 Keywords across 4 Courses • Roman Urdu Explanations

C1: Just Delegate It (25)**C2: AI Fluency (25)****C3: Workflow Design (35)****C4: Governance (40)**
